

Versatile flooring solutions for warehousing and storage facilities

what can resin do for you??

As the beating heart of any manufacturing or distribution business, a busy warehouse is one of the toughest flooring environments out there. HGVs, pallet trucks, stillages and fork trucks shift heavy loads up to 24 hours a day, seven days a week. With thousands of people working in warehouses day and night across the UK choosing the correct flooring solution is imperative. Epoxy resin warehouse flooring is:

- Heavy-duty so able to accommodate forklift truck and pallet truck traffic
- Resistant to impact, abrasion, chemical and heat damage
- Easy to clean and maintain
- Slip resistant
- Ideal for creating a safe working environment, - designated walkway and gangway demarcation
- Quick to install - Minimum operational downtime

resin floor systems

delivered on time, on budget and on spec

Choosing the right warehouse floor can help you to keep dust levels down and generally make it easier to send out your products in better condition. Dependent on budget available resin coatings or screeds which are suitable for all types of warehouses and storage facilities are easy to keep clean and allows you to maintain that glossy look for years to come. Epoxy resin is totally impervious and therefore any grease, oil and fuel will remain on the surface until cleaned up making it ideal for Warehouse flooring.

Anti-Slip

If required, anti-slip safety flooring can be applied to high traffic pedestrian areas such as gangways and loading areas.

Quick to Install

Epoxy resin is the ideal for warehouse flooring as operational downtime can be kept to a minimum. With options starting from as little as 4 hours drying time per coat and by installing using out of hours and phased work programmes it is possible to accommodate most clients.

Hard-wearing

Even in the most arduous environments there are options to meet the challenging demands for Warehouse floors, accommodating busy and heavy-duty forklift truck traffic. Resistant to impact, abrasion, chemical and heat damage.

Health & Safety demarcation walkways & gangways

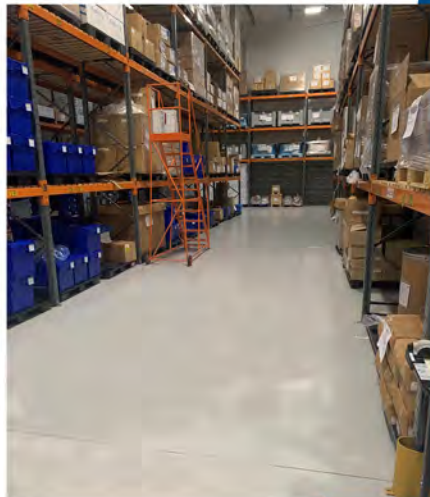

With a variety of colours available a highly visible safety yellow is usually recommended for demarcation lines so as to ensure awareness for staff and visitors of pit falls such as a dramatic change in level and moving traffic to meet Health and Safety Executive guidelines.

Arrk Europe Ltd

Engineering manufacturer, Kings Norton

700 square meter warehouse area

The existing floors had multiple layers of failed floor paint and all areas needed to be heavily shotblasted to clean and prepare the concrete. Once all repairs were completed then two coats of Resdev Pumatect high build epoxy resin were laid in the chosen light grey and safety red, with green to walkway gave clear demarcation. As an additional level of health and safety all fire exits were completed with safety yellow chevrons.

Ezi-Dock™ Systems Ltd

Pharmaceutical manufacturer,
Nottingham

500 square metres warehouse area

The old floor was firstly heavily shotblasted and ground using a diamond grinding machine, to remove the paint and to clean and prepare the concrete. Once fully vacuumed clean and joints were repaired, two coats of Resdev Pumatect high build epoxy in mid grey was laid. The job was completed with two coats of Resdev Pumatect high build epoxy resin coating system to the walkway in Chelsea Blue.

The total project took 4 days to complete and was on time and on budget and provided the client with an epoxy resin floor that is attractive, hard wearing, easy to clean and transformed the new warehouse area.
